

*Protection
against
bed bugs*

Bed Bugs can lay dormant for up to nine months, in our bedding. But when waking, they can suck three times their body weight of our blood, leaving you with itchy welts and scars which can become infected with the possibility of spreading blood related diseases.

Bed Bugs are notorious for infesting homes, hotels, apartments and backpackers.

BUGSTOP is an integral part of the SMART range and should be part of anyone's commercial requirements.

HOW IT WORKS

BUGSTOP special formulation is specifically designed to reduce and prevent bed bugs feeding

KEY BENEFITS

Anti-bed bug, anti dust mite, anti fungal and anti-bacterial
