FLOURISH

Flourish is a yarn derived from the canola flower. This is a fast renewable resource as the lifecycle of the plant is approximately 14 weeks. It is environmentally friendly as it doesn't create any residual waste. It is a versatile plant with the fibres from the stem used for yarn and the oil from the seeds used to make vegetable oil. Flourish is a natural superhero with the presence of negative ions which make you feel relaxed and refreshed- perfect for mattress ticking.
