

Intense takes away your stress at night for a blissful, deep rest

A disturbed balance between cortisol and melatonin can cause sleeping problems. In a normal, healthy rhythm, these two hormones engage in a balanced dance over the course of a 24 hour period

A sleeping body easily charges up to high voltage (25-30.000 V)

High body voltage = high cortisol levels

Intense takes away your high voltage stress by using Nega-Stat® trilobal carbon thread to capture these electrons and release them into the air. The voltage and tension literally flows away from the body

Soft to the touch

Recharges the body

Sleep with less stress

Helps with restful sleep
