

# renew

There are many important reasons to use RENEW fabric for your mattress.

As society embraces all aspects of sustainability, the need to make better choices for our environment moves to the forefront of our minds.

A good place to start is with RENEW.

RENEW is made from the recycled polyester from PET bottles.

With the same performance qualities as regular polyester, it is easy to move across to a more sustainable option in RENEW.

- Uses around 90% less water in production than virgin polyester.
- Uses less energy in production than regular polyester.
- Reduces landfill.
- Performance is the same as regular polyester but is kinder to Mother Nature.

## renew Process
